

NATURAL WOOD FINISHES

ASH

A favourite for individuals who prefer a pronounced open-grain pattern similar to oak. Ash can be stained to resemble oak, if desired. Sapwood is light creamy white; heartwood is light to dark brown. Strong, heavy, hard and high in shock-resistance.

Natural Wood Available Sizes
3/4" x 3 1/4"
3/4" x 4"

CHERRY

Elegant, prestigious and stately. The presence of cherry in a home or office setting imparts feelings of elegance and exclusivity. Highly praised heartwood varies from rich deep red to reddish brown. Sapwood is white to light yellowish cream. Very stable, medium to low shock-resistance.

WALNUT

Generally straight grained, but sometimes has a wavy or curly grain that produces an attractive appearance. Highly praised heartwood is light brown to dark chocolate brown. Sapwood of walnut is creamy white to tan. Walnut has good dimensional stability and medium to low shock-resistance.

HARD MAPLE

A versatile species with a subtle grain pattern that suits almost every decor. Famous for its ivory white sapwood and contrasting shades of brown heartwood. Heavy, strong and stiff. Resists shock and marring.

HICKORY

Hickory has both coarse-textured and fine grain patterns combined. A diverse combination of bright white sapwood (with hints of fine brown lines) and pale to rich reddish brown heartwood. Extremely tough and resilient, the hardest North American wood. A popular choice for high traffic applications.

RED OAK

A traditional wood flooring species with a porous textured open grain appearance. Light pink to dark reddish brown. A hard and dense wood with very good dimensional stability.

Natural Wood Colour Collection

- Golden
- Pacific
- Gunstock
- Caramel
- Ancient Patina
- Whisky Barrel
- Walnut
- Colonial
- Antique

WHITE OAK

A very popular choice for wood flooring with a medium to coarse texture and an open grain appearance. Sapwood is light-coloured and the heartwood is light to dark brown. A hard and heavy wood with great wear-resistance.

RED PINE

Highly figured grain pattern that adds an element of warmth and ambience to the home or cottage. Reddish to pale brown heartwood with tan to yellowish white sapwood. Great dimension stability and machining qualities but not as resistant to scuffs and dents as hardwood species. Any nicks or dents that develop over time from normal use as flooring will add character and patina and will in no way shorten the lifespan of the floor.

ENGINEERED FLOORING

In addition to the Natural Wood solid hardwoods, Majestic North Products are also available in Engineered Hardwood. Incorporating a 4.5mm wear layer into a total construction thickness of 19.0 mm (3/4"). Majestic North's engineered flooring is the perfect solution for areas where traditional hardwood flooring is impractical.

WIDE PLANK Exclusive Majestic North Collection

In keeping with original hard wood flooring tradition, Majestic North has continued to carry the widest and longest flooring planks available in the industry.

The use of wider and longer lengths planks reduces the number of end and edge seams in the flooring, creating a more authentic looking floor. Wide Plank flooring is uniquely adaptable to different moisture levels, dramatically increasing overall durability and stability regardless of the climate because the lumber spends at least twelve months curing through a combination of air and kiln drying. This dedication to quality gives each customer added assurance regarding the life and appearance of their floor.

Wide planks Dimensions:		
Widths	3", 5", 7"	4", 6", 8"
Lengths	up to 10 feet	up to 10 feet
Overall thickness	3/4"	3/4"

In addition to the standard colours to choose from, ANY custom colour and shade is available.
